# Gtd **Datacenter Network**

DESCRIPTION

Gtd has a Datacenter network strategically distributed in Chile, Peru and Colombia. It is important to highlight the use of renewable energies in all our Datacenters.

CHARACTERISTICS:

- Variable capacities from "Clean Room projects" to shared housing.

- Security with control access and close surveillance circuit cameras for monitoring in all Datacenter rooms.

- To ensure the continuity of the electricity supply, there is a redundant power supply configuration for each room, in addition to UPS and generators.

Gtd **Datacenter Network**

- To ensure the continuity of the electricity supply, there is a redundant power supply configuration for each room, in addition to UPS and generators.

- The equipment is kept in a climate-controlled environment to maintain ideal operating conditions.

- We have early fire detection systems and NOVEC inert gas fire extinguishing system.

- Support available 7 days a week to attend to issues and constant monitoring of rooms.

- We have a "Remote Hands" service, so the Gtd staff will be available to shutdown, reboot or power on your equipment as requested.
