

VSAT Platforms

DESCRIPTION

Gtd puts at your disposal its wireless connectivity service, Satellite Broadband Service, which allows data to be transmitted to sites that are far in distance or inaccessible geographic areas. Gtd satellite network, based on VSAT technology, has coverage in Chile, delivering a connectivity service anywhere in the continental territory and the southern cone.

CHARACTERISTICS:

- Connection speeds from 256 Kbps to 40 Mbps. (Asymmetric).
- Our technology allows accessibility and connectivity in remote places, far from network coverage.
- With this service, your company can have 1:1 - 1:4 - 1:10 sharing rates.
- It is easy to install, allowing the antennas to be located on patio, the roof or above the ground.
- The VSAT system allows access to: high-speed Internet anywhere in Chile or the southern cone, access to your corporate data network, remote offices and telephony.
- There is the option of Fixed Antennas (Standard) and Auto-Tracking Antennas (constant setting).
- Communication security and reliability.
- Native TCP / IP system.
